

# THE STATE OF UTAH

OFFICE OF STATE ENGINEER

T. H. HUMPHERYS  
STATE ENGINEER

SALT LAKE CITY

May 25, 1934

Memorandum for Office Study only, by Reid Jerman

RE: MILL DAM DIST.

May 25, 1934 at 10 A. M. I estimated the water flowing from the Hubbard Spring and area above as being .20 second feet. 15 to 20% of this water was flowing down the natural channel passed Hubbard Spring Ditch diversion dam. The balance was being diverted into said ditch. The estimated water available at and being diverted into Mill Dam Ditch at same time was .40 second feet.

R.J.
